THE BOILERS ACT, 1923

INTRODUCTION
Regulation of boilers was a provincial subject. There were seven Provincial Boiler Acts. Some of them were enacted several years earlier and they were out of date, and all of them were inconsistent with each other. To secure uniformity throughout India in all technical matters connected with boiler regulations the Indian Boilers Bill was introduced in the Legislature.

STATEMENT OF OBJECTS AND REASONS
Under the Devolution Rules the Regulation of boilers is a provincial subject, subject to legislation by the Indian Legislature. There are at present seven Provincial Boiler Acts; some of them were framed many years ago and are out of date, and all of them are inconsistent with each other. The result is that different rules are enforced in different provinces and the anomalous position has been reached that a boiler which is allowed to work up to a certain pressure in one province can only be worked to a much lower pressure when transferred to another province. Further in the interest of safety a boiler required regular inspection in whatever Province it may be situated and it is wrong that in certain Provinces no boiler law should be in force at all. The object therefore of the present legislation is—(a) to secure uniformity throughout India in all technical matters connected with boiler regulations e.g., standards of construction, maximum pressure, and (b) to insist on the registration and regular inspection of all boilers throughout India.

The object can only be attained by all India Act, with uniform regulations throughout the country; under the Devolution Rules, as explained above, it is the function of the Central Government to promulgate such an Act.

(2) The subject being a highly technical one a Committee of three persons including two boiler experts were appointed to examine the existing provincial laws and to put forward proposals for an all India Act, based on the provisions of these laws brought up to date and coordinated. The report of this Committee has been published and the views of Local Governments obtained upon it.

The Bill which is now presented to the Assembly is the result of their recommendations as modified after consideration of the views of Local Governments.

(3) The only important respect in which the Bill diverges from certain of the existing Acts is with regard to certificated boiler attendants. It is only in a few provinces that boiler attendants are required to possess certificates of competency. The Industrial Commission recommended that this requirement was unnecessary, a recommendation which the Boiler Laws Committee endorsed, and in which Local Government including those now insisting on certificates have unanimously agreed.

ACT 5 OF 1923
The Indian Boilers Bill having been passed by the Legislature received its assent on 23rd February, 1923. It came on the Statute Book as the Indian Boilers Act, 1923 (5 of 1923). The nomenclature of the Act has been changed by
section 2 of the Indian Boilers (Amendment) Act, 2007 whereby the word
"Indian" has been omitted. Now it stands as THE BOILERS' ACT, 1923
(5 of 1923).

COMMENTS

(i) A Company is a legal entity and is included in the definition of "owner"; B.N.
Mehra v. State, AIR 1956 Cal 137: 60 Cal WN 305.

(ii) The meaning of the definition of "boiler" in section 2(b) is that the definite and
clear object of the contrivance should be to generate steam under pressure. The fact that
in a particular contrivance though steam is generated under pressure, the steam is used
only for sterilising some vessels, cannot take it away from the definition of a "boiler" for
the purposes of this Act.

1. Subs. by Act 49 of 2007, sec. 3(5), for "includes any person".
2. Subs. by Act 49 of 2007, sec. 3(6), for clause (f). Earlier clause (f) was substituted by Act 18
of 1960, sec. 2(c) (w.e.f. 6-5-1960). Clause (f), before substitution by Act 49 of 2007, stood as
under:

"(f) "steam-pipe" means any pipe through which steam passes from a boiler to a prime-
mover or other user or both, if—

(i) the pressure at which steam passes through such pipe exceeds 3.5 kilograms per
square centimetre above atmospheric pressure; or
